2025 FALL NEWS & PROMOTIONS

Velum FILTRATION - Exclusive to Pro Cut

All industrial machines require constant maintenance and regular replacement of filters in order to operate properly and guarantee their maximum productivity. The **Velum** patented system is applied externally, directly above the inlet grille of the ventilation and cooling system of the production unit. Velum collects and holds the oily mists in its knitted fabric and ensures the normal passage of fresh and clean air into the machine while protecting the internal filter. The Velum replacement check is visual: when the protective filter is covered by polluting agents, you simply need to replace it. It can be replaced in 5 seconds.

Call us today about this great solution for your CNCs, compressors and other machines!

PRO CUT - PREMIUM BRAKE AND PARTS WASH SOLVENT

20L Pail \$112.86 ea
